

Claims: 1. The use of gyroscopes to stabilize radar towers, communication towers, towers designed for defense from cruise missiles, ICBMs, manned or unmanned aircraft (Drones), perimeter defense of all types and for recreation or advertising purposes. 2. The use of clear structural members (such as Lucite) suitable to contain photovoltaic panels for the purpose of generating electric power. 3. The use of wind power electric power generators for generating electric power on high towers. 4. The use of high free standing towers to support radar, communication and other antennas and equipment. 5. The use of plastic clear (such as Mylar Polyester Film) and reinforced cloth (such as Hypalon) to protect radar antennas, radar equipment, other military defense equipment, other communication antennas and equipment that are installed on high towers (free standing towers and/or guyed towers) and protected by air supported structures made of any material. 6. The use of elevators (enclosed or not enclosed) to construct, service, maintain, view, or for any other purpose installed on high (1000 feet or higher) free standing or guyed towers intended for military, communication, commercial, or entertainment or pleasure purposes.
